

Masterka®

FCI EXCLUSIVE

Description :

Masterka® is a unique combination of punctum plug with a preloaded lacrimal duct stent. It is indicated for congenital nasolacrimal duct obstructions that are resistant to probing.

Unlike the traditional “pulled” technique the Masterka® has no metallic probe or suture attached to it and, therefore, it is not pulled out of the nose.

Instead, Masterka® is pushed into the nasolacrimal duct and anchored in place at the punctum by a plug-like fixation head.

Main characteristics :

- Designed by B. Fayet, M.D.
- For congenital lacrimal duct obstructions
- Anchored at the punctum by a plug
- No nasal retrieval, no knot or sutures needed
- Silicone stent pre-mounted on stainless steel introducer

Sizing is important for proper stent selection

AVAILABLE IN CANADA
